SauceDemo E-commerce Website

Manual QA Test Plan

Project overview

A beginner manual functional-testing exercise of the SauceDemo demonstration e-commerce website.

Objectives

Verify key user workflows, check validation behavior, record results and organize evidence.

Scope

Login, product sorting/details, cart operations, checkout validation, order overview and confirmation. Excludes automation, performance/load testing, security penetration testing and backend verification.

Approach

Manual black-box functional testing through the browser UI. Compare expected and actual behavior. Mark PASS only after execution and evidence. NOT VERIFIED cases are proposed and must be executed.

Environment

SauceDemo demo website. Browser/device details were not fully captured. Use fictional data only in checkout forms.

Entry and exit criteria

Entry: website and test account accessible. Exit: all cases executed, outcomes recorded, evidence retained, and reproducible defects documented.

Deliverables

Test plan, test-case workbook, evidence folders, bug log, test summary and README.

Limitations

TC-001–TC-009 are supported by user-reported results/screenshots. TC-010–TC-015 are inferred placeholders, not verified results. Original screenshots are not embedded; add them to evidence folders.
